

■ UNIFIED CLOUD SECURITY & OBSERVABILITY

The whole cloud, *unified*.

One AI-native platform for cloud security across AWS, Azure, and Google Cloud. Continuously assess posture, protect sensitive data, and detect and respond to cloud threats in real time, with unified visibility into every account and resource, without juggling separate tools.

- + AWS
- + AZURE
- + GOOGLE CLOUD
- + CSPM
- + DSPM
- + CDR

01 CLOUD SECURITY CAPABILITIES

01 CSPM Cloud Security Posture Management Continuously assess cloud configurations across AWS, Azure, and GCP, flagging misconfigurations, drift, and policy violations. + Misconfiguration & drift detection + Benchmark & policy compliance	02 DSPM Data Security Posture Management Discover and classify sensitive data across cloud stores, surfacing exposure, shadow data, and over-permissioned access. + Sensitive-data discovery + Exposure & access-risk scoring	03 CDR Cloud Detection & Response Detect threats across the cloud control plane and workloads in real time, with automated containment and remediation. + Runtime & control-plane detection + Automated cloud response
04 MULTI-CLOUD Multi-Cloud Observability Unified monitoring for AWS, Azure, and GCP. Track utilization, cost, and health across every account in one dashboard. + Full-stack cloud monitoring + Serverless & container visibility	05 ANALYTICS Cloud Analytics & Visibility Expand visibility across endpoints, applications, network, and every cloud service in a single place. + Cross-surface telemetry + Natural-language asset queries	06 DLP Cloud Data Loss Prevention Policy-driven controls inspect sensitive data in motion across cloud and email, with compliance tracking built in. + Content & context classification + Outbound & cloud-share controls

Security and IT, in one secure control plane.

Cylerian is the only AI-native platform that unifies IT Ops and Security. One agent detects threats and provides the hands to fix what it finds, automating patching, deployment, and remediation across your cloud.
