

■ AI-NATIVE EXPOSURE MANAGEMENT

Find the 5% of risk that *actually matters*.

Tool sprawl fragments visibility and buries analysts in context-free vulnerability data. Cylerian unifies IT, cloud & identity into one attack surface, then uses adversary intelligence to surface the exposures attackers would actually exploit — and closes them.

01 / Unify

See every asset.

One platform unifies IT, cloud, identity and network — plus shadow AI — into a single, business-tagged view of your attack surface.

02 / Prioritize

Focus on the 5%.

Predictive AI and adversary intelligence rank exposures by real-world risk, so teams fix what truly threatens crown-jewel systems.

03 / Remediate

Close it fast.

Automated playbooks, one-click patching and native ticketing accelerate response and slash manual remediation effort.

EXPOSURE MANAGEMENT CAPABILITIES

ONE PLATFORM · ONE DATA FABRIC

01 ASSET Unified Asset Visibility Discover every asset across endpoint, cloud, identity and network — enriched with business-critical tags.	02 SCAN Network Scanners & Discovery Credentialed and authenticated scans with exposure mapping and risk-aware scan orchestration.	03 AI Predictive Risk Scoring AI surfaces the 5% of vulnerabilities driving 95% of real-world risk to your business.
04 PATH Attack-Path Analysis Trace exploitable paths from an exposed asset all the way to crown-jewel systems.	05 INTEL Threat-Intel Mapping Map vulnerabilities to active adversary campaigns and live exploitation in the wild.	06 ASSESS Continuous Assessment Agent and agentless assessment mapped to MITRE ATT&CK and CIS benchmarks.
07 SOAR Automated Remediation Integrated SOAR, one-click patching and network isolation drive MTTR down sharply.	08 SYNC Ticketing Integrations Automated tickets to ServiceNow, Jira and ITSM with step-by-step remediation guidance.	09 REPORT Security Posture Reporting Live posture overview — open findings, improvement actions and risk scores in one console.
